Product Description

The TMG-CP23 Chicken Plucking Machine maximizes the efficiency of farm operations and other poultry businesses by making the plucking process quick, smooth and easy. 121 rubber fingers line the inside of a heavy-duty stainless steel drum. Simply turn it on and add your chicken, duck, turkey or other poultry to rapidly remove feathers, dirt and debris for a clean product ready for its next steps of processing.

Our customers rave about the speed at which this machine enables them to process their poultry. The 23" steel body runs at a 1400 RPM rotation speed and has a large feather discharge chute to prevent build up and clogging. Its commercial construction is built to last and can handle 4-6 chickens at one time.

Powered by a reliable 110 V, AC power, CSA certified motor that hums at a low 60 Hz frequency for quiet, smooth operation. Four sturdy rubber castor wheels and two bolted on handles make this plucker easy to move and transport around your processing facility, barn or shop.
